Roman Blinds

Birk roman blinds are designed using the highest quality components and materials to create and offer a large variety of colour and material options. Roman blinds can be manufactured in screen, translucent or blackout fabrics from our extensive range or they can be customised using your own fabric.

Roller Blinds

Birk roller blinds create a stunning backdrop to any room while offering glare reduction, filtered light and insulation with the ability to see out whilst retaining the privacy you require.

Insulation and energy savings

Energy savings are an important issue for all consumers. Roller blinds help to reduce the amount of heat entering the home or office in summer and preventing heat loss in winter. Installation of the appropriate blind system reduces your energy consumption and impact on the environment

Life should be simple

With over 25 years in the industry, we understand that customers want life to be easy – Birk specialises in motorisation of residential and commercial screens, blinds and curtains. We can also integrate automatic controls that are reliable and easy to use.

Our two year warranty on fabrics and components, along with our 5 year warranty on motors, not only gives you total peace of mind with your investment, but also ensures that our high performance standards are maintained.

Innovative thinking

For many years, people have enjoyed the benefits of one-touch motorised systems – less noise, improved control, greater comfort and added safety.

Now it's more affordable than ever. Simplified technology means awnings, screens, blinds and curtains can be controlled with a single switch, from a remote control or from a home automation system. Birk can also customise components to suit individual requirements.
